

CASE STUDY: RIVERSIDE RESORT

CUSTOM SEATING RISER

To create outstanding and improved sightlines within the existing event space at Riverside Resort in Laughlin, NV, Staging Concepts provided a custom seating riser. This demountable seating solution not only brings layout flexibility to a popular event space, but it allows the resort to host multiple banquets, conferences, and performances all within the same area.

The custom seating riser was developed using Staging Concepts' standard equipment in a custom configuration. To support the unique layout of the platforms, we provided our SC9600 bridge support systems as a solid and reliable base. Additionally, we provided guardrails, closures, and to top it off, LED aisle lighting. To prevent foot traffic behind the seating riser, we also include a custom gate to block off this area.

With this new custom seating riser solution, Riverside Resort can successfully host multiple events in a flexible area and maximize their venue.
